## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q5

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Ted, the computer science enthusiast, has accepted the challenge of writing a program that checks if the number of digits in an integer matches the sum of its digits.

Guide Ted in designing and writing the code to solve this problem using a 'do-while' loop.

##### ***Input Format***

The input consists of an integer N, representing the number to be checked.

##### ***Output Format***

If the sum is equal to the number of digits, print "The number of digits in N matches the sum of its digits."

Else, print "The number of digits in N does not match the sum of its digits."

Refer to the sample output for formatting specifications.

**Sample Test Case**

Input: 20

Output: The number of digits in 20 matches the sum of its digits.

**Answer**

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);
        int number = scanner.nextInt();

        int digitCount = 0;
        int digitSum = 0;
        int tempNumber = Math.abs(number);

        do {
            int digit = tempNumber % 10;
            digitCount++;
            digitSum += digit;
            tempNumber /= 10;
        } while (tempNumber != 0);

        if (digitCount == digitSum) {
            System.out.println("The number of digits in " + number + " matches the
sum of its digits.");
        } else {
            System.out.println("The number of digits in " + number + " does not match
the sum of its digits.");
        }
    }
}
```

**Status :** Correct

**Marks :** 10/10
